Installation of SeaGen Tidal Energy System Postponed Friday, August 3rd 2007

Marine Current Turbines regret that the installation of its SeaGen tidal energy system, originally set for the end of August, is to be postponed because the jack-up installation vessel, Jumping Jack, had been required to extend its period of work on another contract for a third-party and is also in need of repair work following an incident in port. Marine Current Turbines wishes to install SeaGen in Northern Ireland's Strangford Lough before the end of this year and are in discussions with A2Sea, the owners and operators of Jumping Jack, to agree a new date for SeaGen's installation as soon as possible.

For further information about the SeaGen project, please go to <http://www.seageneration.co.uk>.
